VIPRE Email Security Archiving

Fast and reliable email archiving

Add archiving to your email security service[1]

You've already chosen VIPRE for your email protection service - now add cloud-based email archiving to give you complete confidence to rapidly retrieve any email from our secure email archiving service.

Compliance and retrieval requirements demand that businesses store more data than ever before. VIPRE Email Security Archiving makes archiving and searching your entire email history fast and easy, no matter how much data you need to store.

On site backups are expensive to maintain and can make the retrieval of archived emails difficult. VIPRE Email Security Archiving's cloud based archiving provides an ideal solution for simplifying email retrieval and long-term retention, without creating more work or eating into your IT budget.

One console for all email security

Email Security Archiving unifies with our Email Security Essentials, Email Security Cloud, Email Security Encryption and Email Security Phishing Protection products in a single web interface, enabling complete administration of your email services from a single web console. End users can manage their quarantined emails, access email continuity, and search their personal email archives from one web console.

Peace of mind

Email Security Archiving is easy to use for administrators, users and compliance officers. All email is securely and reliably captured, retained, and available for later search and retrieval at any time.

Access

Selectively extend the benefits of email archiving to your users to enable them to access and search their own email archive. The administrator can disable the user access to personal archives if needed.

Access for Compliance Officers

Access to your Email Security Archiving archive is restricted to your company's compliance or privacy officer, ensuring complete separation of email administration from legal review.

Advanced search

The advanced search allows complex queries using a complete set of include/exclude criteria, across all email attributes. You can perform multiple searches with different search criteria and view results in separate tabs.

Recurring searches*

Set up recurring, scheduled searches using advanced criteria. This enables you to proactively keep a watchful eye for messages added to Email Security Archiving containing restricted content or attachments.

Tag messages*

Build cases by quickly tagging messages directly or through search results. Easily recover the results from past searches for further examination. You can add emails to an existing tag to collect messages for a case and assign multiple tags to messages to identify overlapping cases.

* Coming soon

Compliance log for each message

Know exactly what's happening in Email Security Archiving. Every action performed on a message, whether it is opened, downloaded, redelivered, tagged etc. is recorded in the compliance log for the message.
