## ClickSMART

### Protect your organization from malicious URLs hidden in emails

**ClickSMART provides another level of protection against phishing and ransomware attacks by preventing email recipients from clicking on dangerous URLs. It rewrites URLs in emails, enabling them to be rescanned at the time of the click. ClickSMART is an add-on feature to FuseMail's SecureSMART email security service.**

#### Why you need it

Zero-day attack scenarios see innocent emails containing web links pass through spam and virus filters worldwide. These emails are delivered to the intended recipient because they seem harmless and do not pose a threat. However, after a brief period, the web link contained in the email becomes "weaponized" and is pointed to a phishing site or to a website which can download malicious content to your end-user's device.

This subjects the end-user and your company's network to phishing, ransomware, or other malicious attacks. ClickSMART will stop these links from getting through to end-users; thus ensuring the security of your network.

#### Quick facts

---

- Scans URLs in emails
- Re-writes all web links in emails
- Blocks URLs which could lead to phishing, spear phishing, spoofing and ransomware attacks
- IP Address and Domain Restrictions
- Reporting statistics
- Add-on Feature To SecureSMART
- Reduces security risks

## ClickSMART by FuseMail®

Working in conjunction with FuseMail's SecureSMART email security solution, ClickSMART examines clean email messages for web links and replaces these links with a custom link back to the ClickSMART service. The email is then sent on to the recipient.

When the recipient clicks a link, one of two procedures takes place.

- If the original email message is still held in FuseMail's system, ClickSMART retrieves the original message and rescans the entire content along with any web links.
- If the original email message is not available, ClickSMART scans the original web link.

If the original message or web link is now considered to be malicious, then the user is warned of the risk, or blocked entirely from accessing the web page referenced by the URL.

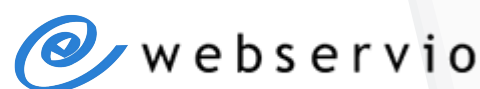

## About FuseMail®

FuseMail® is an advanced email solutions provider that has been ensuring the secure and reliable delivery of corporate email messages for more than 20 years. Providing email solutions to more than 25 million mailboxes, FuseMail offers a range of cloud-based services including sophisticated spam and virus filtering.
